

Insect Control in Autumn Pastures

PRODUCT ADVANTAGES

- ✓ Less Pyrethroid face burn (Parasthesia)
- ✓ Ultra low dose rate
- ✓ 30 minute rainfastness
- ✓ Excellent tank mix compatibility

Trojan insecticide is the latest generation Synthetic Pyrethroid that stands out from the bunch for control of Red legged earth mite (RLEM) and Black headed cock chafer (BHCC) in autumn pastures.

Trojan is the only S5 insecticide currently registered for control of RLEM and BHCC in pastures.

Through its unique capsule suspension formulation the risk of causing skin and eye irritation has been minimised and the odour of Trojan is often less noticeable than other insecticides, making it the most user friendly insecticide for ground and aerial applicators.

COMPARE THE OTHER FEATURES TROJAN HAS TO OFFER

1.	Ultra low dose rates	RLEM - 1 L treats 125 ha at 8 mL/ha BHCC - 1 L treats 58 ha at 17 mL/ha
2.	Rainfast in 30 minutes	No need to worry about rain shortly after application
3.	Non combustible, non flammable	Easy to store and handle
4.	Compatible with a wide range of herbicides and other insecticides	One pass pest and weed control
5.	Trojan insecticide knocks out RLEM in one day in clover, medic and lucerne pastures	Takes the pressure off your pastures almost immediately
6.	No surfactants required	Less time spent preparing and less cost
7.	No solvents	No pasture burn
8.	1 L pack size	No heavy lifting
